Free Slot Tips

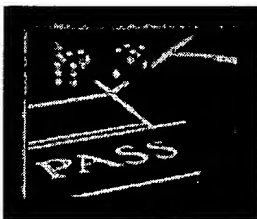

Slots account for the majority of a casino's action and winnings. They are simple to use, inexpensive to maintain, and require little attention or player skill.

Types: There are many different machines games. Jackpot size, combinations, symbols, size and number of coins allowed in each play vary as well. Included these games are the popular video poker games. Modern machines are completely electronic. Symbol combinations come up randomly and machines : *pre-programed* to return a certain percent to the players.

House advantage: A machine returns between 85 percent and 98 percent, depending on the game, location and usage. The average house advantage is calculated to be about 9 percent. Only play slots at a casino with a 98% Payout Average. Of course this DOES NOT mean that all slots are programmed to return 98%. It is up to the player to determine or find those machines, online slots that has a 98% layout. Some machines may have a 85% payout while others have : 98% pay out. Drop a couple of coins several times and if you get a return no m

how small, play a little more. If you get no return, not even the cherry (small return) symbol. Move on to the next. I have went into casinos and just stood a watch before I even started playing. Many times I have watched a person dump his/her whole bank roll into a one slot. Bad Idea huh! And I have seen others w up to a machine that hit the BIG one just after 4 spins. I have set at a machine hit 20 times in 6 hours. You guessed it. That was the 98% return slot. But I us trick when I play. Explained below:

Choose Casino ☒

General tips

- Recognize the symbols that constitute a jackpot on your machine. All machines are different. Las Vegas attendants say winners routinely walk away from winning machines without waiting for the rest of the payout fr attendants. The largest jackpots are all paid by attendants. Play the machines that pay out the most money for your 3 bet spin.
- If you're lucky enough to hit an attendant-paid jackpot -- typically \$1,200 more -- do not touch your machine or leave it for even a second. Do not insert more coins or allow anyone to touch it. A attendant must come by complete the transaction.
- Always play the maximum bet. If a machine will take a bet of five quarter place the five-quarter bet. This gives you the best odds of winning long-t if you get a good hand.
- If you like to play slots, Always look for a 98% or higher payout with a progressive jackpot.

Choose Casino ☒

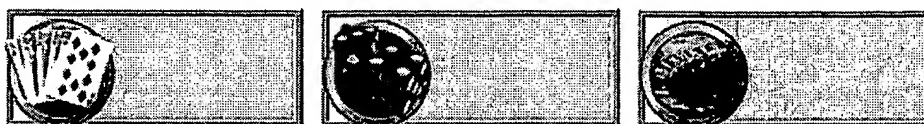

Hot tips players need to know Are there any sure-fire ways to win at slots?
Absolutely. I will give you some.

1. Play the **progressive slot machine** with maximum coins.
2. Continue to play only if the machine is hitting at least one out of four spir
3. Stop playing and cash out if you double your bank roll. Example: If you allotted \$100.00 to play slots and you accumulated \$200.00 or more in winnings -> CASH OUT!
4. Stop playing at a predetermined limit. Don't get caught up in the "I need win my money back" mentality.
5. The trick I use. Each machine has a random number generator. The machines cycles through the random numbers, then starts all over again random number is preset to either pay out a certain number of coins or r to pay out at all. Have you ever played a machine then it just seems to freeze up for a second. This is the machine resetting itself to recycle the

random numbers. From this point I use the single coin button to max out bet, then I push the spin button. I never use MAX bet button at all. I wa space out the time it takes between spins. Example below:

1. Single coin button pushed x 3. Push spin. When the wheels stop count to 3 then start with the single coin button again.

Sorry, I can't guarantee that you'll become an instant winner, because it's tough to beat a house edge that generally runs well over 10 percent, but it also doesn't have to be so tough on your bankroll. So, let's get started.

- The only true skill to playing slots is machine identification. Example: progressive machines offer the opportunity to compare and shop around for the best value. One 25 cent "machine carousel" can have a progressive jackpot of \$2,600, and another bank of machines- exactly the same and standing side by side-\$1,900. You should always be looking for the best opportunities possible.
- Casinos will advertise machines that have a 98.5 percent pay back WOL casino game holding just a percent and a half, and on a machine no less. But there's a down side. If you look closely at the advertisement, it will probably say "on select machines." Furthermore, it probably won't be on the machine itself, and it will generally be limited to a single bank of machines in the casino. Now it becomes your responsibility to find them. Easiest way: Ask a employee, and if he or she doesn't know, have one of them ask a direct supervisor.
- Casinos give away millions of dollars in comps each year, and as a player you deserve your share. Repeat, you deserve your share. How? Casinos now offer you the ability to "comp yourself" by using one of their player's club cards. It's generally based on the number of coins you cycle through the machine, so you might as well get credit for all those quarters you're inserting. Shop casinos for comp value and find out what you're worth to them. If you play online slots, look for a casino that offers the best comp points.
- You always want to treat "comps" as a form of profit, but you never want to gamble just to receive them. It's much better to play a 98 percent pay back machine and increase your winning opportunities than play machines with a poor return that cycle more of your coins. Remember, you're there to stay in action and possibly win, not lose your bankroll for a free buffet.
- If you can't afford to play the maximum amount of coins, you shouldn't be playing that denomination of machine. If dollar slots are too rich for your blood, drop down to a quarter machine. It's always better value to play five quarters versus one dollar or five nickels instead of one quarter. The maximum coins always have the best payout value.
- I recommend not playing back the credits you've accumulated. Cash out and take stock. The problem with playing back credits is that the longer you stay, the machine's built-in advantage eats away at them. It doesn't take long to zero out. Example: If you have \$100.00 bank roll for slots, play that \$100.00 and do not allow the machine to play back your credits. Look at it this way, The credits accumulated is your profit, if any.
- Can't decide which type of machine to play? If you're going to choose between video poker and slots, play video poker. Even poor play on a video poker machine will have a better pay back than most machines.
- Before you walk away from a machine, don't forget to press the cash-out button. Millions are lost each year by gamblers forgetting their winnings.

(stored credits).

- It is your responsibility, if destiny favors you, that you receive full payment when hitting a jackpot. Even with some relatively small jackpots, if the machine is short coins in the hopper, you'll receive only a partial cash payment in the tray, with the balance to be paid by a attendant. If you want to insert more coins and pull the handle, say bye-bye to the remainder of your jackpot.
- Read all the posted material on a machine. It is your responsibility to fully understand all printed information concerning the number of coins to insert, lines needed to be lit, prizes or awards. In most cases, when someone calls an attendant over and complains the machine "just ripped me off," that individual generally didn't read the pay schedule correctly.
- When you insert coins, don't assume all the tokens register before you pull the handle. Played five but only four recorded? Sorry. You'll get a sympathetic pat on the back from the casino, but no money. If this happens, call an attendant before hitting the spin button.
- Avoid machines that use video representations of symbols. With these slots there is absolutely no way to figure out what the payoff percentage of the machine is. If you play one of these slots, make sure you understand the entire pay out table. Do not assume the machine will pay out correctly. It is your responsibility to ensure you get credit for a hit multiple line machine example: on all 5 to 20 lines if you hit.
- Most casinos will hold a machine for you while you go to the restroom, take a short break or even go on a buffet run. Just ask a supervisor to reserve your machine and give a specific time when you'll return.
- Don't chain yourself to a cold machine, even if it's your favorite. Why? Because the longer you stay on any machine, the more time the machine's built-in mathematical advantage has to work you over. This is how casinos build mega-resorts, time always works on their side and a mathematical edge on each and every machine.
- Even though you're only playing slots, you still need to set a loss limit on your bankroll for both your trip and each individual gaming session. Divide your wad per playing session, discipline yourself and stick to it.
- When searching for high pay back machines, ask a few employees where the local players find the best value. Simply put, locals don't play dog machines.
- Leave both your credit and bank teller cards at home so you will not be tempted with the easy convenience of getting cash. Only bet what you can afford to lose.
- Myth - Slot Machines are programmed not to hit a jackpot or pay out. This is incorrect. All slot machines have a random number generator in them. These chips are regulated by the Gaming Commission and MUST pass gaming commission test before being inserted into the machine. This only applies to casinos that are regulated by the state in which they are located. Different rules may apply for casinos that operate on an Indian reservation which we have no data.
